You start learning Japanese, so you need to learn hiragana. Most Japanese teachers will help you start with a hiragan chart. Unfortunately, most charts are not that big. Having done a few chart-toe in my time, I've seen a lot of them. There are so many styles, types and techniques out there. But you have to find a chart that fits your learning style. That's why we've put together 27 of the best (and only the best) hiragan charts out there. You can compare the charts and choose the one that suits you. Or you can grab them all and fill the binder. The choice is hers. Scroll further. The standard Hiragan charts These hiragana diagrams are simple and boring. But there's nothing wrong with that. 99.99% of Japanese students will receive such charts. They do their job and are easy on printer ink cartridges. For new Japanese students, any of them will be my first recommendation. Hiragan's Tofugu Chart Is the First on our list is our own. It is used on the Tofugu Learn Hiragana page (you have to check it out if you are studying hiragana and have not chosen the method, or just want to learn the hiragana way faster than everyone else). It's very simple, print (in black and white), and contains not only basic kana, but dakuten/combo hiragan as well. No bells and whistles and nothing unusual about it, but it works. Click on the image to download the full-size version. The same rule applies to other charts in this list (click for full size). Dr. Moku's Hiragan Chart by Dr. Moko is an app that teaches hiragan using mnemonics. This is effective, and I recommend it to anyone who is not affiliated with Tofugu's Hiragan mnemonic. These are their main hiragan charts though, so no mnemonics here. However, it is a nice, simple one that will be useful for many Japanese students. Also, download it from the original source. Be sure to check out all the other things that Dr. Moku has to offer as well, especially if you are studying hiragan. Tofugu Retired Hiragana Chart This is our old hiragana schedule. There's nothing wrong with that. You may even prefer his patina. It's like our current one. It just has a different style. The mnemonic Hiragan Charts When it comes to learning and memorization, mnemonics are the best way to go, hands down. So it's only natural that a few mnemonic based hiragan diagrams have been created. If you plan to take this route, you should feel free to mix and match individual kana mnemonics. Not all mnemonics connect with all people. Some will feel more personal (and therefore more effective) than others. Grab mnemonics that work best for you to learn hiragan even faster. Tofugu's Hiragana Mnemonics Chart Because our method of learning hiragana is all about mnemonics, we put together a hiragana mnemonic graph a few weeks ago. But you Download it right here by clicking on the image below. If mnemonics do your job, you don't even need this chart after a while. Looks like he's Professor Purdue. Good on Hatas-Sesey for coming up and sharing these hiragana mnemonics. I love it when teachers put in extra time and effort to help their students. Michael Rowley's Mnemonic Hiragan Chart This chart comes from a 1992 book called Kanji-Pict-O-Graphix by Michael Rowley. Love the title. The X at the end makes it cool. It floats around a lot of places online without accreditation, so thanks to Tofugu reader A L for letting us know the source. Hiragan Charts with Stroke Order When writing manually, stroke order is quite important. You can tell when someone writes in the wrong stroke order because, well, something just looks. Your handwriting will improve ten times if you write hiragan correctly. With kanji, you can learn a stroke order by following a small set of stroke order rules. With hiragana, you better learn from each individual order of Kahn's stroke. There aren't many, and these charts will help. Mama No Yume Koubou's Hiragana Stroke Order Chart This stroke order chart covers all the major hiraganas and uses colors as well as a numerical indicator to show the correct order of running.
